

SPT TarkovPriceUpdater Instructions

This utility will take an existing assort.json, query the latest prices from the Tarkov.dev API, and apply the appropriate currency and markup depending on your selection.

1. Run “TarkovPriceUpdater.exe”
2. In the GUI Browse to your existing assort.json file
3. You can enter your own output filename in the “Save As” field or leave it default. Default will add “_updated” to the end of your assort.json filename.
4. Select your desired currency from the dropdown. You can select RUB, USD, or EUR.
5. Leave the slider at zero for current Tarkov.dev trader pricing. Drag the slider up for the desired markup, or down for the desired discount.
6. For unmatched items (custom items not in the Tarkov.dev database, or items not allowed on the flea market); select what you want the utility to set for pricing. You can set:
 - “Leave Untouched”
 - “Set to zero”
 - “Apply slider discount/markup”
7. Click “Run”
8. You should now see the utility log output on the screen.
9. The file should now be saved in the same directory with the updated filename, or whatever custom Save As location you set in step 3

Tarkov Trader Price Updater

Input JSON file:

Output file:

Output currency:

Discount Markup

Markup: 140%

Unmatched items:

Log:

```
Reading: C:\Users\sadams\Documents\GitHub\SPT-TraderUtility\SPT-TraderUtility_SourceCode\TarkovPriceUpdater\Assort_SAMPLE.json
Querying Tarkov.dev...
Fetching FX (USD base)...
FX: 1 USD = 76.52 RUB; 1 EUR = 89.09 RUB
Computing lowest trader prices...
Applying Markup: 140% (multiplier 2.4)
Writing output: C:\Users\sadams\Documents\GitHub\SPT-TraderUtility\SPT-TraderUtility_SourceCode\TarkovPriceUpdater\Assort_SAMPLE_updated.json
☑ Done. (pretty)
```

Done. Created:
